

I'am a long haul trucker and I have 4 Xm radios and I am planning to add a fifth radio in another of my personal vehicle. The XM service is subscription based and is based on the needs of the customers. I as a customer want my XM service to offer on demand weather and road reports city by city. The NAB and it's lobbyist need to stop this action of prohibiting these services. I urge the FCC to reject NAB's petition 04-160 and support the XM programming packages in it current form and any future features.
